Robert J. Slotterback, Ph.D., Superintendent

Demond A. Means, Ed.D., Assistant Superintendent

Dennis Joyce, Director of Pupil Services

Gail Grieger, Business Manager

October 2007

Dear Parent or Guardian:

As school nurses in the Mequon-Thiensville School District, we are writing to inform you about the dangers of meningococcal disease, commonly known as bacterial meningitis, a rare but potentially fatal infection that can occur among teenagers and college students. While meningococcal disease is rare and difficult to contract, it is very serious. There is now a vaccine that may help to prevent this infection.

Meningococcal bacteria can potentially be transmitted through close contact with an infected person through direct contact with respiratory and/or oral secretions from an infected person (for example, through sharing drinking containers or kissing). Teenagers and college students are at increased risk for meningococcal disease compared to the general population, accounting for nearly 30 percent of all U.S. cases every year. Meningococcal disease can be misdiagnosed as something less serious, because early symptoms like high fever, severe headache, nausea, vomiting and stiff neck, are similar to those of common viral illnesses. The disease can progress rapidly and can cause death or permanent disability within 48 hours of initial symptoms.

Up to 83 percent of all cases among teens and college students may potentially be prevented through immunization, the most effective way to prevent this disease. A meningococcal vaccine is available that protects against four out of five strains of bacterium that cause meningococcal disease in the U.S.

The Centers for Disease Control and Prevention (CDC) and other leading medical organizations recommend routine meningococcal immunization for adolescents during the preadolescent doctor's visit (11- to 12-year-olds), adolescents at high school entry (15-year-olds) if they have not previously been immunized, and for college freshmen living in dormitories. I suggest you contact your child's health care provider to help you decide if your child should receive this vaccination.

For more information about meningococcal disease and immunization, please feel free to contact us directly:

Donges Bay, Oriole Lane & Lake Shore families, please contact:

Cathy Cero-Jaeger 262-238-7932 ccerojaeger@mtsd.k12.wi.us

Wilson, Steffen & Homestead families, please contact:

Nancy Slawson 262-238-5964 nslawson@mtsd.k12.wi.us
